### General Statement

Under the close supervision of the Fresno District Senior Water Resource Control Engineer and consistent with good customer service practices and the goals of the State and Regional Board's Strategic Plan, the incumbent is expected to be courteous and provide timely responses to internal/external customers, follow through on commitments, and to solicit and consider internal/external customer input when completing work assignments.

## Position Description

The Water Resource Control Engineer (WRCE) is responsible for conducting on-site inspections of public water systems, using engineering knowledge to prepare and review technical reports/sanitary survey reports and water supply permits. The WRCE is responsible for conducting investigations related to water quality problems, conduct enforcement activities to bring the system back into compliance and track compliance. The WRCE is responsible for working independently, communicate effectively, and managing multiple tasks. Daily proficient utilization of office equipment and the Microsoft Office Suite is required. The WRCE should maintain consistent and regular attendance, communicate effectively (orally and in writing) in dealing with the public and/or other employees; develop and maintain knowledge and skill related specific tasks, methodologies, materials, tools, and equipment; complete assignments in a timely and efficient manner; and adhere to departmental policies and procedures regarding attendance, leave, and conduct.

## Essential Functions (Including percentage of time):

35%	Using engineering knowledge and expertise, conduct on-site inspections of public water systems to evaluate their ability to maintain safe and reliable drinking water sources, treatment, storage, and distribution systems while meeting all regulatory requirements. On-site inspection activities include physically examining water sources, treatment plants, storage tanks, pump stations, and distribution facilities. Additional surveillance tasks include reviewing system operational records, procedures, and administrative programs; gathering data to update system inventory and inspection databases; and preparing technical reports and correspondence documenting inspection findings, corrective actions, and compliance with regulatory requirements.
25%	Use engineering knowledge and technical expertise to prepare and review reports and recommendations on permit requests for construction or modification of recycled water and public water system sources, treatment plants, distribution and collection systems, and other related construction activities. Make and check engineering calculations, design drawings, and other engineering documents to assure that water purveyors comply with good engineering practice and legal requirements. Conduct on-site field inspections of water system facilities as part of permit application processing. Assist in conducting investigations of water quality problems such as those resulting from chemical and bacteriological contamination of public water supplies. Attend public meetings related to specific projects or water systems. Consult with and advise water consumer groups and others on water supply, water quality, and drinking water and recycled water regulatory requirements.

## Marginal Functions (Including percentage of time):

10%	Provide engineering assistance to public water systems on water quality issues, operational problems, and treatment facilities. Assist with departmental research projects, policy development, and studies. Provide direct assistance and program feedback to County environmental health departments and other agencies.
-----	--

Classification: Water Resource Control Engineer  
Position Number: 880-457-3846-037

10%	Conduct enforcement activities to bring public water systems into compliance with applicable State laws and regulations. Draft enforcement letter, citations, and compliance orders for the Senior WRCE's review and signature. Track compliance dates and take necessary follow-up action to ensure public water systems comply with directives of the Department.
5%	Navigate various computer databases to track funding projects, water quality sampling and reporting compliance. Review plans for public water treatment plants and proposed projects for recycled water reuse to determine compliance with health and engineering standards and regulations. Review and comment on environmental impact reports to local agencies.
5%	Assist in conducting engineering investigations of water quality problems such as those resulting from a response to an emergency such as a fire, flood, earthquake, chemical or bacteriological contamination of public water supplies.
5%	Consult with and advise a variety of health and other public officials, engineers, attorneys, water consumer groups, environmental justice groups and others on public health aspects of water supply quality control programs. Assist in making presentations to interested groups on a variety of health-related water supply matters.
5%	Perform other duties as required.

#### **Typical Physical Conditions/Demands:**

The job requires extensive use of a personal computer and the ability to sit/stand at desk, use a phone, and type on a keyboard for extended periods of time. Ability to lift 15 pounds, bend and reach above shoulders to retrieve files and/or documents. Navigate uneven, rugged terrain for extended periods of time including hiking and climbing water tanks in varying temperatures throughout the workday and different seasons, driving to field visits up to three and a half hours away. Must possess a valid driver's license and be able to operate motorized vehicles to inspections sites.

#### **Typical Working Conditions:**

The incumbent works in a state owned or leased facility, in an enclosed, non-windowed office cubicle in a smoke-free environment. The typical work schedule is Monday through Friday, with exceptions in the event of staffing needs during water system emergency response efforts. Travel may be required locally and within the state to conduct site visits up to three and a half hours away and may occasionally require overnight stays. Collaboration with field operation branch staff will require in-office participation with local staff at least four days a week, or in accordance with applicable telework policies. Collaboration includes performing the above-described duties for multiple district offices, as determined by the supervisor to meet operational needs of the branch.

Classification: Water Resource Control Engineer  
Position Number: 880-457-3846-037

### **Supervisor Statement**

I certify this duty statement represents an accurate description of the essential functions of this position. I have discussed the duties of this position with the employee and provided the employee a copy of this duty statement.
